NOKIA FPGA HACKATHON

FPGA Hackathon is a 2-day-long event. Our hackathon is usually held in a hybrid form – online and stationary in Kraków. The event aims both experienced experts and beginners in the field of programming FPGA circuits.

In each edition participants deal with a number of demanding tasks verifying the knowledge and skills of writing RTL code, simulation and many others.

24-hour-long FPGA Hackathon is a unique opportunity for business, science and education environments, as well as FPGA and ASIC enthusiasts, to integrate and share their experience.
